Product Change Notice

SR122T (SSR-1 Serial Data Recorder)

Effective Date: 20 March 2014 (*earliest date that a customer could expect to receive changed material*)

Description of change: The surface mount CR1220 coin cell battery holder has been replaced with a through-hole CR1220 coin cell battery holder.

Reason for change: The surface mount CR1220 coin cell battery holder termination to the board could fail. While only a single failure (during battery removal) has been reported to date, the connector was changed to enhance the robustness of the connection.

Customer impact: Mechanical interface and device function are unaffected by this change. All connectors and indicators (LEDs) remain in the same location as on the original board. Some components were moved to accommodate the battery connector mounting holes.

The change described in this notice will be reflected in all future shipments of the SSR-1 Serial Data Recorder. Please contact sales@slerj.com with any questions.
